DEALER

Tough Steel Construction : Every part is built to withstand years of hard work. The Shredder hood is constructed of DOMEX alloy steel. Domex has a higher wear resistance than AR200 wear plate. **All rotors are computer balanced to assure smooth operation.**

Large removable air screens provide excellent suction and allow easy access to the inside of machine for maintenance.

Two position material deflector allows for wind-rowing or close it for conventional shredding

Conveyor drops the material to the passenger side of the machine. This allows you to windrow the tops of various crops for use in feeding applications.

OPTIONAL ELEVATOR

Equipping the machine with the optional elevator allows you to load the material into a forage truck for transport off of the fields

The optional elevator folds back for transportation and allows you to dump the material onto the ground.

Optional end transport shown in pictures allows you to easily move the machine from field to field.

SPECIFICATIONS
